Humphrey Field Analyser

Allergan-Humphrey manufactures a broad line of automated projection perimeters from the best in quantitative screening to accurate, repeatable threshold testing and statistical analysis for glaucoma management.

Humphrey's Flexible Goldmann-Standard Projection System, sophisticated testing strategies and easy light-pen control, have made the Field Analyser the modern standard of perimetry.

Tutorials and helpful screen prompts make test selection as easy as selecting from a menu. Test validity is guaranteed with frequent fixation checking and false positive/false negative patient reliability indices. Results are printed in several easy-to-read graphic formats. To highlight abnormal test results and field changes, Allergan Humphrey offers the unique STATPAC™ statistical analysis program that compares your patient's visual field to age matched normals and previous examination results.

PROPINE™ Prescribing Information

Presentation Sterile ophthalmic solution containing dipivefrin hydrochloride USP 0.1% (w/v). Also contains benzalkonium chloride Ph Eur 0.005% (w/v), disodium edetate Ph Eur 0.015% (w/v), with sodium chloride Ph Eur and purified water Ph Eur. **Uses** For the control of intraocular pressure in chronic open angle glaucoma or ocular hypertensive patients with anterior chamber open angles.

Dosage and administration The usual dosage is one drop in the affected eye(s) every 12 hours. **Contra-indications, warnings, etc.** *Contra-indications:* patients suffering from closed angle glaucoma. *Use in pregnancy:* the safety of intensive or protracted use of dipivefrin during pregnancy has not been substantiated.

Precautions: dipivefrin should be used with caution in patients with narrow angles since dilation of the pupil may trigger an attack of angle closure glaucoma. Macular oedema is a rare occurrence with adrenaline use in aphakic patients. Prompt reversal generally follows discontinuance of the drug. Macular oedema with dipivefrin does present as a possibility in the aphakic patient. *Adverse reactions:* rebound vasodilation and allergic blepharoconjunctivitis are rarely observed following treatment with dipivefrin. Dipivefrin has been used successfully in patients who demonstrated such intolerance to adrenaline. Adrenochrome deposits have been rarely observed following use of dipivefrin. Very slight transitory stinging may occur upon instillation in some patients. This product contains benzalkonium chloride and should not be used by patients continuing to wear soft (hydrophilic) contact lenses.

Pharmaceutical precautions Store at room temperature. Discard any unused contents 28 days after opening the bottle. **Legal category** POM. **Package quantities** Plastic dropper bottle containing 10ml. **Further information** Nil.

Basic NHS Cost: (as at October 1988) £4.65. **Product Licence number** 0426/0040.

Date of preparation July 1988.
